

SQL Project: Operation Analytics & Metric Spike Investigation

Objective:

To utilize advanced SQL skills to analyse data, provide actionable insights, and enhance operational efficiency while investigating sudden changes in key metrics.

Project Overview:

Aimed at improving end-to-end company operations, this project involved analysing data from operations, support, and marketing teams to derive valuable insights. Advanced SQL queries and MySQL Workbench were used to identify areas of improvement and investigate metric spikes.

Skills Applied:

- Data importing and transformation (e.g., changing VARCHAR to DATETIME).
- SQL queries for trend analysis, duplicate detection, and engagement monitoring.
- Statistical analysis for user retention and email engagement.

Data Preparation:

Dataset for Job Data Analysis is formed based on given sample. The dataset is imported using Import Wizard.

```
CREATE DATABASE op_case_study_1;
USE op_case_study_1;
CREATE TABLE job_study1 (
    ds VARCHAR(15),
    job_id INT,
    actor_id INT,
    event VARCHAR(15),
    language VARCHAR(15),
    time_spent INT,
    org VARCHAR(1)
);
```

The other tables are larger in size, an alternate method is used to upload them on server. For ease in further analysis datatype of date-time column is changed from VARCHAR to DATETIME.

```
CREATE DATABASE op_cs2;

CREATE TABLE users (
    user_id INT,
    created_at VARCHAR(50),
    company_id INT,
    language VARCHAR(20),
    activated_at VARCHAR(50),
    state VARCHAR(20)
);

CREATE TABLE email_events (
    user_id INT,
    occurred_at VARCHAR(100),
    action VARCHAR(50),
    user_type INT
);
```

```

CREATE TABLE events (
  user_id INT,
  occurred_at VARCHAR(70),
  event_type VARCHAR(50),
  event_name VARCHAR(50),
  location VARCHAR(50),
  device VARCHAR(30),
  user_type INT
);

SHOW variables LIKE 'secure_file_priv';

#Table- users
LOAD DATA INFILE "C:/ProgramData/MySQL/MySQL Server 8.0/Uploads/users.csv "
INTO TABLE users
FIELDS TERMINATED BY ','
ENCLOSED BY '"'
LINES TERMINATED BY '\n'
IGNORE 1 ROWS;

```

Key Insights - Job Data Analysis:

1. Jobs reviewed over time:

Calculated jobs reviewed per hour daily to measure operational performance to check efficiency of task performance.

```

# jobs reviewed over time
SELECT
  ds,
  time_spent,
  ROUND(3600 / time_spent) AS Num_of_reviews_per_hr
FROM
  job_study1
GROUP BY ds
ORDER BY ds;

```

	ds	time_spent	Num_of_reviews_per_hr
▶	2020-11-01	11	327
	2020-11-02	113	32
	2020-11-03	90	40
	2020-11-04	113	32
	2020-11-05	83	43
	2020-11-06	17	212
	2020-11-07	73	49
	2020-11-08	47	77
	2020-11-09	71	51
	2020-11-10	58	62
	2020-11-11	23	157
	2020-11-12	98	37
	2020-11-13	39	92
	2020-11-14	14	257
	2020-11-15	109	33

	ds	time_spent	Num_of_reviews_per_hr
	2020-11-16	111	32
	2020-11-17	59	61
	2020-11-18	60	60
	2020-11-19	79	46
	2020-11-20	29	124
	2020-11-21	98	37

	2020-11-26	56	64
	2020-11-27	104	35
	2020-11-28	22	164
	2020-11-29	20	180
	2020-11-30	15	240

2. Engagement Analysis:

Monitored daily throughput and compared it with the 7-day rolling average for actionable insights.

#Throughput Analysis-

Change data type of date column(ds) from varchar to datetime

```
ALTER TABLE job_study1 ADD COLUMN temp_date DATE;
```

```
UPDATE job_study1 SET temp_date =STR_TO_DATE(ds, '%d-%m-%Y');
```

```
ALTER TABLE job_study1 DROP COLUMN ds;
```

```
ALTER TABLE job_study1 CHANGE COLUMN temp_date ds DATE;
```

#Average Throughput calculation

```
SELECT
```

```
    WEEK(ds) AS weeknum,
```

```
    COUNT(WEEK(ds)) AS event_count,
```

```
    COUNT(WEEK(ds)) / SUM(time_spent) AS throughput
```

```
FROM
```

```
    job_study1
```

```
GROUP BY weeknum
```

```
ORDER BY weeknum , ds;
```

	weeknum	event_count	throughput
▶	44	63	0.0139
	45	59	0.0164
	46	48	0.0149
	47	61	0.0166
	48	23	0.0191

3. Language Usage:

Identified Persian as the most used language (37.8%), followed by Arabic and English.

percentage share of each language

```
SELECT
    language,
    ROUND(COUNT(language) / (SELECT COUNT(*) FROM job_study1) * 100,2)
    AS Share_of_each_language_perct
FROM
    job_study1
GROUP BY language;
```

	language	Share_of_each_language_perct
▶	English	14.96
	Arabic	15.75
	Persian	37.80
	Hindi	11.42
	French	11.81
	Italian	8.27

4. Data Integrity:

Detected and eliminated duplicate entries to ensure data accuracy.

#duplicates

```
WITH duplicates AS (
    SELECT *,ROW_NUMBER() OVER (PARTITION BY ds,job_id,actor_id,event,language,time_spent,org ) AS rownum
    FROM job_study1)
SELECT * FROM duplicates having rownum>1;
```

	job_id	actor_id	event	language	time_spent	org	ds	rownum
▶	20	1006	decision	English	39	B	2020-11-13	2

2. Retention Analysis:

- a. Monitored weekly logins, showing a 125% increase in sign-ups by the second week post-launch.

```
#weekly retention analysis
SELECT
    event_name,
    occurred_at,
    WEEK(LEFT(occurred_at, 10)) - 16 AS weeknu,
    COUNT(WEEK(LEFT(occurred_at, 10))) AS counts
FROM
    events
WHERE
    event_name IN ('login' , 'complete_signup')
GROUP BY weeknu;
```

- b. Tracked individual user activity patterns, identifying inactive periods for targeted interventions. The example below shows activity of user ID 492.

```
#weekly retention analysis
WITH activity AS(
SELECT user_id,
       event_name,
       location,LEFT(occurred_at,10) AS login_date,
       yearweek(LEFT(occurred_at,10)) AS weekcode,
       RIGHT(yearweek(LEFT(occurred_at,10)),2) AS weeknum,
       DENSE_RANK() OVER(PARTITION BY user_id ORDER BY user_id,yearweek(LEFT(occurred_at,10))) AS retention
FROM events
WHERE event_name = 'login'
-- group by user_id
order by user_id)
SELECT DISTINCT user_id,
               event_name,
               location,
               weeknum
FROM activity;
```

user_id	event_name	location	weeknum

492	login	United States	18
492	login	United States	20
492	login	United States	21
492	login	United States	23
492	login	United States	24
492	login	United States	27
492	login	United States	28
492	login	United States	29
492	login	United States	30
492	login	United States	31
492	login	United States	34

3. Device Retention:

Evaluated weekly engagement per device, ranking the top 20 and bottom 20 devices by usage.

```
#weekly engagement per device
SELECT tnow FROM (
SELECT COUNT(DISTINCT WEEK(LEFT(occurred_at,10))) AS tnow FROM events) AS total_weeks;
# The query returns total number of weeks in given data.
#There are 19 weeks in given data
SELECT user_id,
       device,
       COUNT(DISTINCT WEEK(LEFT(occurred_at,10))) AS activeness,
       CASE
       WHEN COUNT(DISTINCT WEEK(LEFT(occurred_at,10))) >= 17 THEN 'Excellent'
       WHEN COUNT(DISTINCT WEEK(LEFT(occurred_at,10))) BETWEEN 12 and 17 THEN 'Very Good'
       WHEN COUNT(DISTINCT WEEK(LEFT(occurred_at,10))) BETWEEN 8 AND 12 THEN 'Good'
       ELSE 'Poor'
       END AS Retention
FROM events
GROUP BY user_id
ORDER BY activeness DESC,user_id;
```

user_id	device	activeness	Retention

4. Email Campaign Effectiveness:

- a. Analyzed email open and click rates to measure engagement.

```
#email engagement
WITH email_open AS (
    SELECT user_id,
           COUNT(action) AS email_open FROM email_events WHERE action = 'email_open'
    GROUP BY user_id),

email_cl AS (
    SELECT user_id,
           COUNT(action) AS email_click FROM email_events WHERE action = 'email_clickthrough'
    GROUP BY user_id )

SELECT
    swd.user_id,
    COUNT(action) AS weekly_digest_count,
    eo.email_open,
    ecl.email_click
FROM email_events AS swd
    LEFT JOIN
    email_open AS eo ON swd.user_id = eo.user_id
    LEFT JOIN
    email_cl AS ecl ON swd.user_id = ecl.user_id
WHERE action = 'sent_weekly_digest'
GROUP BY swd.user_id
ORDER BY email_open DESC;
```

user_id	weekly_digest_count	email_open	email_click
5987	18	12	2
10224	18	12	3
10975	17	12	7
11044	17	12	4
11936	17	12	3
347	17	11	4
2979	17	11	3
3390	17	11	9
3744	17	11	3
5010	18	11	4
5952	18	11	3
6612	18	11	8
8156	17	11	3
8462	17	11	5

- b. Identified maximum and minimum user interactions with campaigns.

Max/Min. Emails sent to Users and Respective Users Count

```
SELECT MAX(weekly_digest_count) AS Max_Weeks_email_sent,  
       COUNT(*) AS Users_count  
FROM metrices  
WHERE weekly_digest_count=  
       (SELECT MAX(weekly_digest_count) FROM metrices);
```

Max_Weeks_email_sent	Users_count
18	908

```
SELECT MIN(weekly_digest_count) AS Min_Weeks_email_sent,  
       COUNT(*) AS Users_count  
FROM metrices  
WHERE weekly_digest_count=  
       (SELECT MIN(weekly_digest_count) FROM metrices);
```

Min_Weeks_email_sent	Users_count
1	99

Max/Min Emails Opened and Respective Users Count

```
SELECT MAX(email_open) AS Max_email_opened,  
       COUNT(*) AS Users_count  
FROM metrices  
WHERE email_open=  
       (SELECT MAX(email_open) FROM metrices);
```

Max_email_opened	Users_count
12	5

```
SELECT NULL AS MIN_email_opened,  
       COUNT(*) AS Users_count  
FROM metrices  
WHERE email_open IS NULL;
```

MIN_email_opened	Users_count
NULL	40

Max/Min Email Links Clicked and Respective Users Count

```
SELECT MAX(email_click) AS MAX_email_clicked,  
       COUNT(*) AS Users_count  
FROM metrices  
WHERE email_click =  
       (SELECT MAX(email_click) FROM metrices);
```

MAX_email_clicked	Users_count
9	1

```
SELECT NULL AS MIN_email_clicked,  
       COUNT(*) AS Users_count  
FROM metrices  
WHERE email_click IS NULL;
```

MIN_email_clicked	Users_count
NULL	517

Outcome:

The project delivered critical insights into operational performance, user engagement, and email campaign efficiency. Key outcomes included:

- Improved data integrity and analysis accuracy through SQL techniques.
- Enhanced understanding of application popularity and user retention patterns.
- Actionable recommendations for optimizing email campaigns and user engagement strategies.

Conclusion:

This project demonstrated the power of SQL in extracting actionable insights and guiding decision-making to improve operational efficiency and user engagement. The findings underscore the importance of continuous monitoring and data-driven strategies for organizational growth.
